INDUSTRY SPECIALITY SEATING RANGE

Factory • Laboratory • Operator • Workshop • Retail (F. L. O. W. R.)

Introducing a new range of Industry Speciality Chairs - Karo's **F. L. O. W. R.** RANGE.

Specifically designed for those 'behind-the-scenes' environments, where 'stuff gets done' and where machine type typically dictates the operator's posture.

With Karo's RANGE of seating, there is now the option to design your own chairs to meet your personnel's specific requirements. A full line of ergonomic seating, engineered to meet the rigorous needs of both harsh work and hi-tech environments.

Get the job done correctly and consistently with personnel who are comfortable at their workstation. Comfortable operators can significantly increase productivity, with them being able to remain at their workstation for longer periods, concentration levels can be improved and in the long term, absenteeism can be reduced.

Selection Elements:

1. **Height adjustability** – specific to your operator's requirements, together with ergonomic support. One size does not fit all. Fixed chair heights to be determined beforehand.
2. **Colour coding** - keeps the correct chair at the correct workstation in the correct area.
3. **Ability to be cleaned**, depending on the environment. Choose the finish of the chair from polyurethane to plastic to upholstery – including finishes for high-tech environments and cleanrooms.
4. **Manoeuvrability** – should the chair be able to move freely or remain static? Combinations of castors and/or glides are available.
5. **Component finishes**, from powder coated to chrome plated or a combination thereof.
6. **Warranties** depending on operating environments; 2 years for over 12 hour shifts and 5 years for standard 8 hour shifts.

Once a specific chair has been selected, all we require is the height of the workstation, to ascertain what height to manufacture the chair.

Brighten up your workforce with Karo's new **F. L. O. W. R.** RANGE
